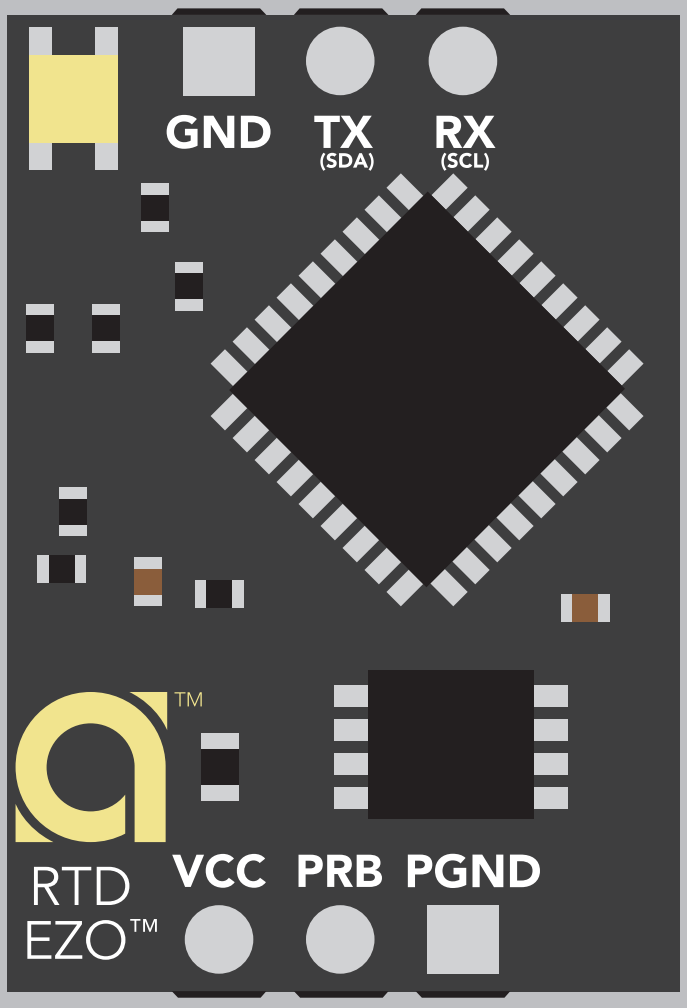
EZO-RTD™

Embedded Temperature Circuit

Reads	**Temperature**
Range	**-126.000 °C – 1254 °C**
Resolution	**0.001**
Accuracy	**+/– (0.1 + 0.0017 x °C)**
Response time	**1 reading per sec**
Supported probes	**Any type & brand PT-100 or PT-1000 RTD**
Calibration	**Single point**
Temperature output	**°C, °K, or °F**
Data protocol	**UART & I²C**
Default I²C address	**102 (0x66)**
Operating voltage	**3.3V – 5.5V**
Data format	**ASCII**
Onboard Data Logger	**50 Readings**



Electrical Isolation not needed

RoHS COMPLIANT

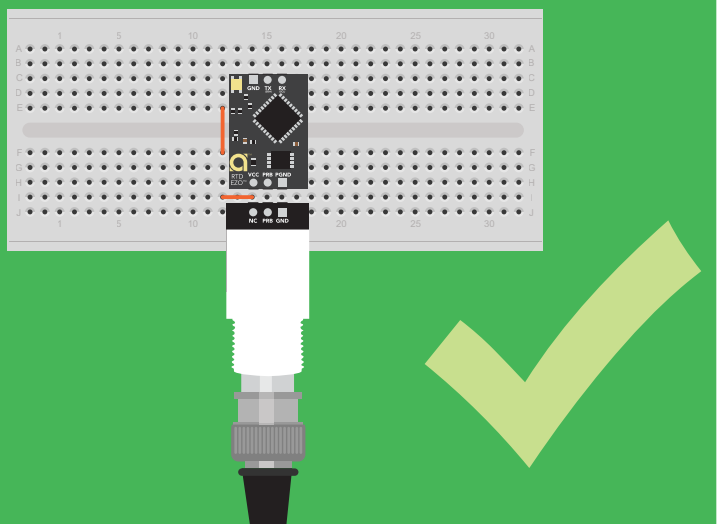
STOP

SOLDERING THIS DEVICE VOIDS YOUR WARRANTY.

This is sensitive electronic equipment. Get this device working in a solderless breadboard first. Once this device has been soldered it is no longer covered by our warranty.

This device has been designed to be soldered and can be soldered at any time. Once that decision has been made, Atlas Scientific no longer assumes responsibility for the device's continued operation. The embedded systems engineer is now the responsible party.

Get this device working in a solderless breadboard first!



Do not embed this device without testing it in a solderless breadboard!

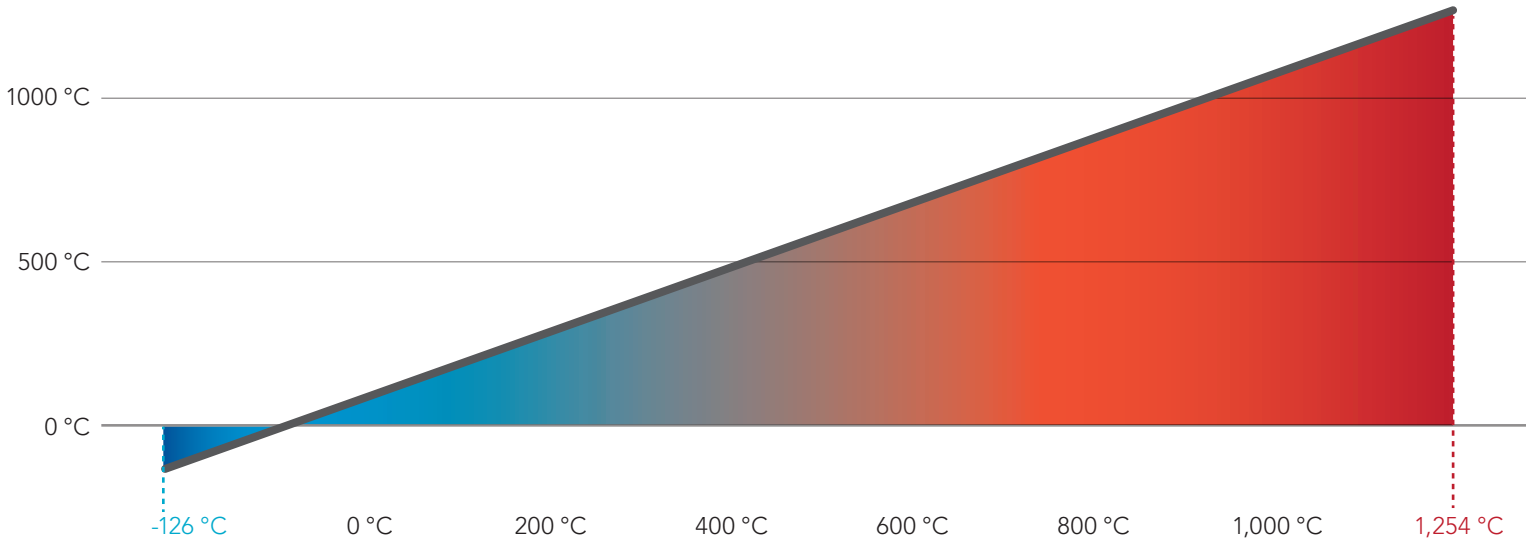
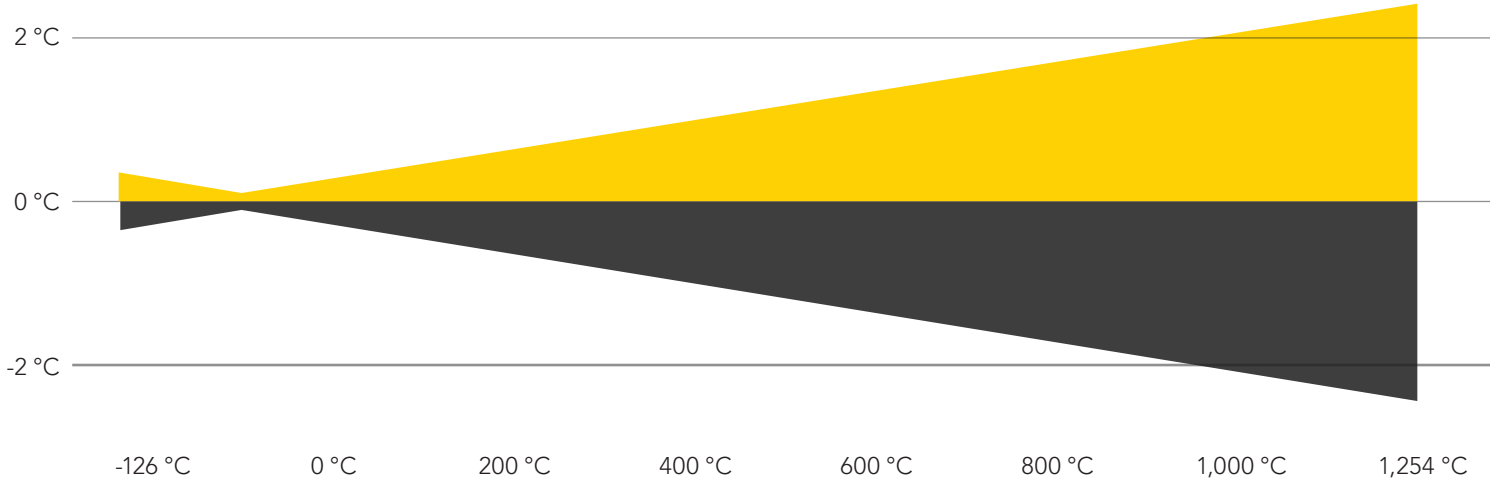
Absolute max ratings

Parameter	MIN	TYP	MAX
Storage temperature (EZO™ RTD)	-65 °C		125 °C
Operational temperature (EZO™ RTD)	-40 °C	25 °C	85 °C
VCC	3.3V	5V	5.5V

EZO™ RTD temperature sensing range



EZO™ RTD temperature sensing accuracy



Atlas Scientific PT-1000 probe

- Accuracy +/- (0.15 + (0.002*t))
- Probe type: class A platinum, RTD
- Cable length: 81cm (32")
- Cable material: silicone rubber
- 30mm sensing area (304 SS)
- 6mm diameter
- BNC connector
- Reaction time: 90% value in 13 seconds
- Probe output: analog
- Full sensing range -200 °C to 850 °C
- Cable max temp 125 °C
- Cable min temp -55 °C

The Atlas Scientific EZO™ RTD Temperature circuit only works with PT-100 and PT-1000 probes.

To read temperatures above, or below the max cable temperature, an additional probe housing (thermowell) is needed to protect the cable.

100mm Temperature Thermowell

50mm Temperature Thermowell

30mm Temperature Thermowell

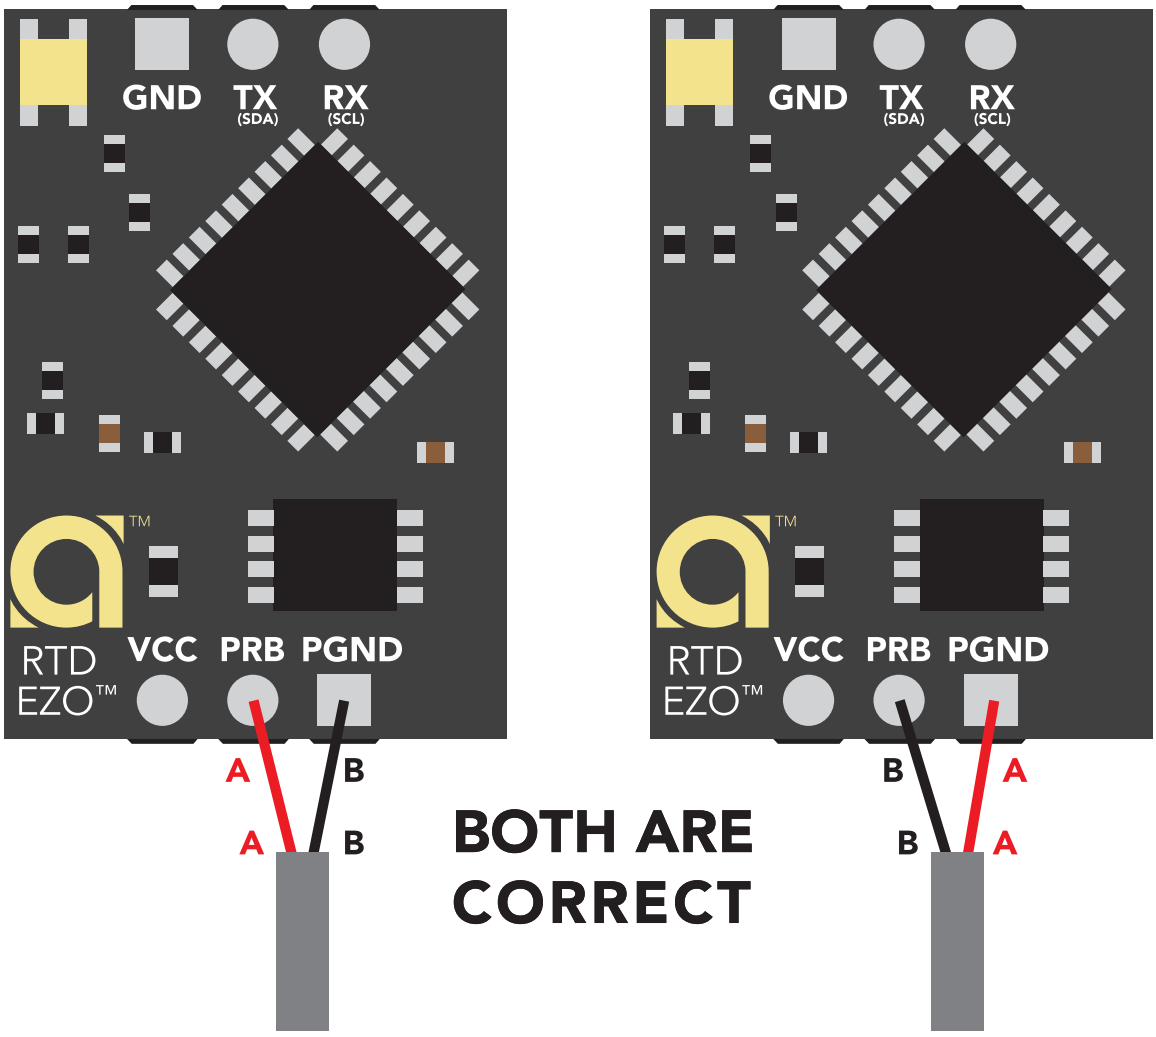
AtlasScientific™ Environmental Robotics

Using other brand PT-100/PT-1000

The EZO™ RTD Temperature circuit will auto-detect if the connected probe is PT-100 or PT-1000.

Probe class	Accuracy
AA	+/- (0.1 + 0.0017 × °C)
A	+/- (0.15 + 0.002 × °C)
B	+/-(0.3 + 0.005 × °C)
C	+/- (0.6 + 0.01 × °C)

It makes no difference which lead of the temperature probe is connected to the two probe pins.

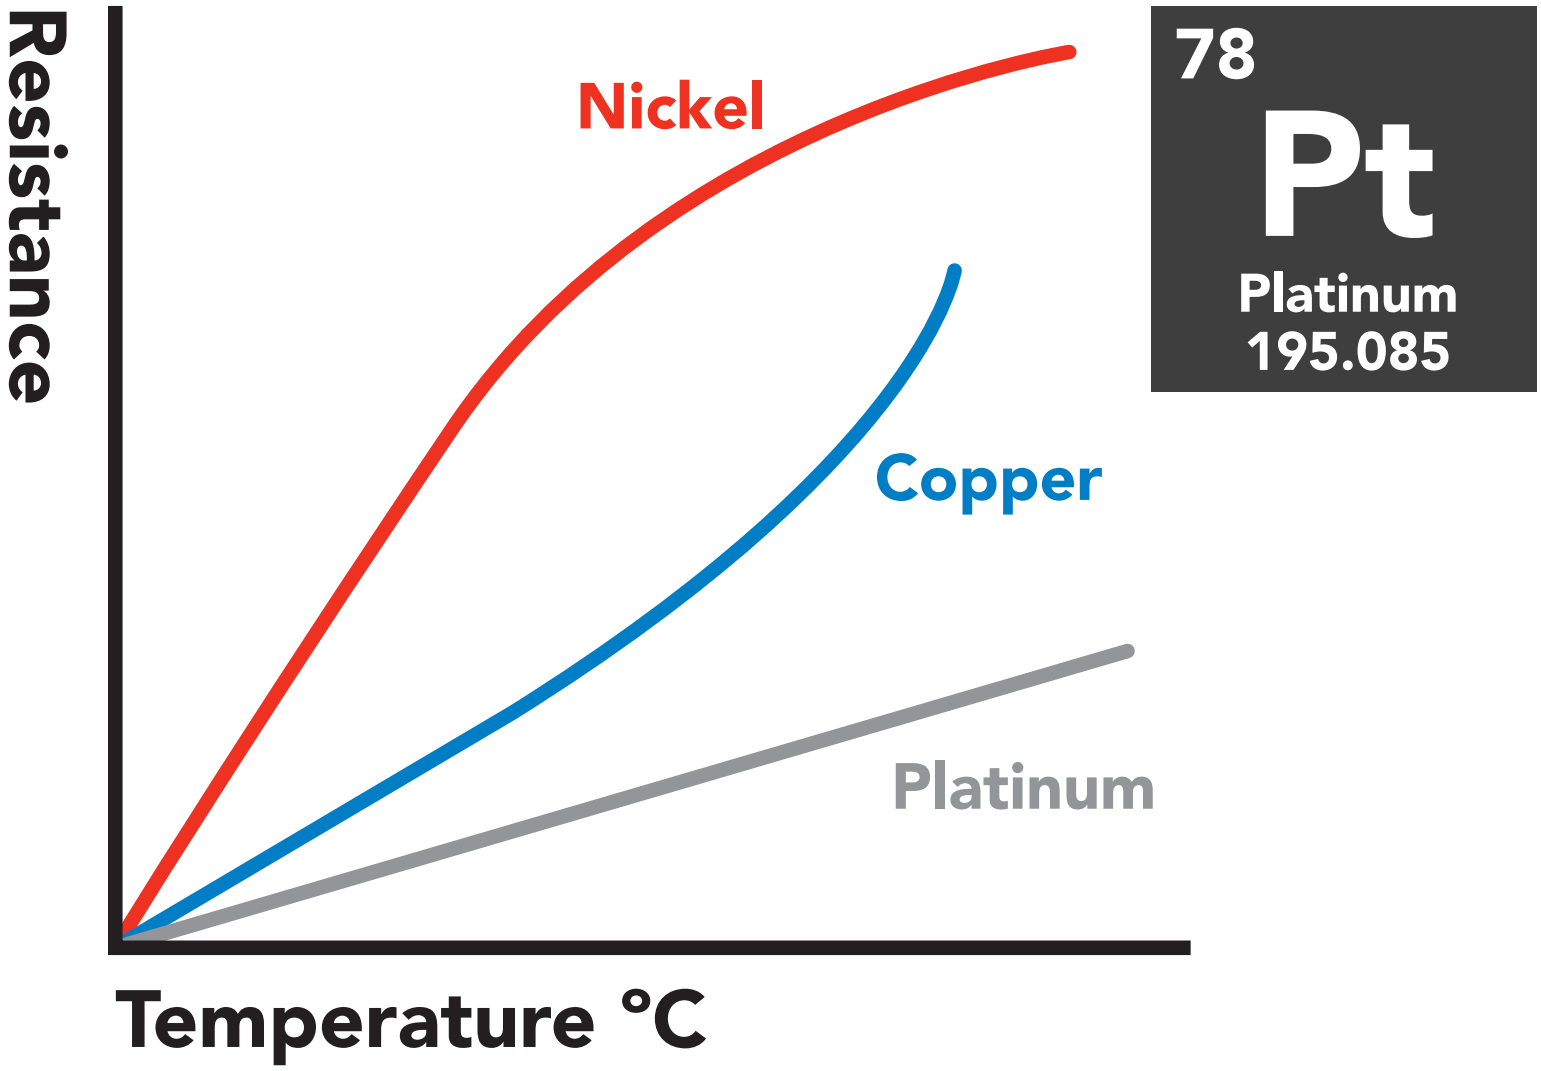


Operating principle

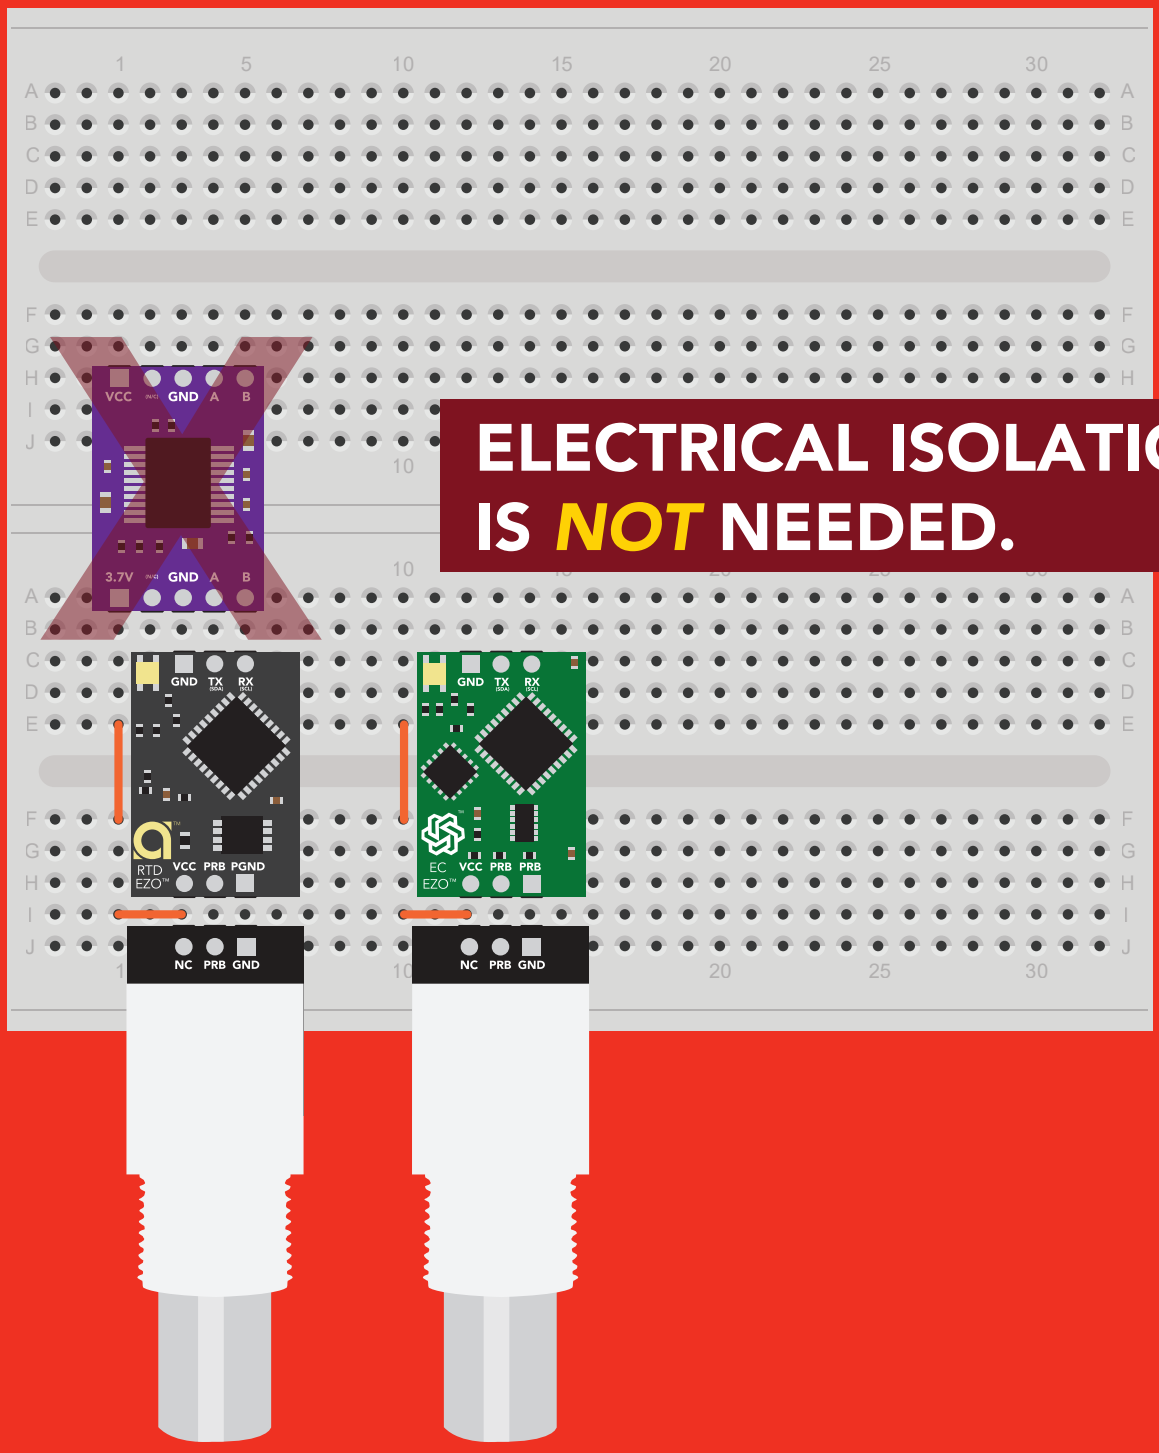
The Atlas Scientific EZO™ RTD Temperature circuit is a small footprint computer system that is specifically designed to be used in robotic applications where the embedded systems engineer requires accurate and precise measurements of temperature through a generic PT-100/PT-1000 temperature probe.

RTD = Resistance Temperature Detector
PT = Platinum
PT-100 = 100 Ω at 0˚C
PT-1000 = 1k Ω at 0˚C

Unlike any other material, platinums correlation between resistance and temperature seems to be woven into the fabric of the universe. It is for this reason, that the platinum RTD temperature sensor is the industrial standard for temperature measurement.



Power and data isolation



ELECTRICAL ISOLATION IS *NOT* NEEDED.

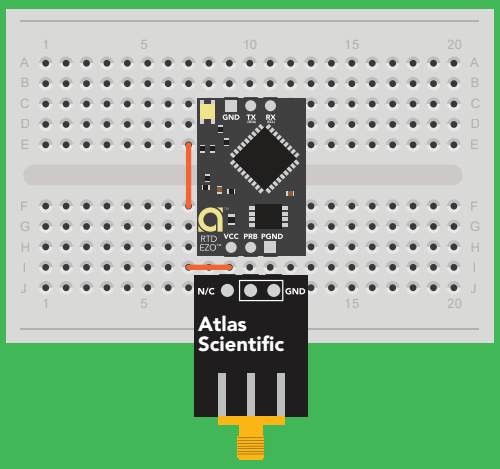
AtlasScientific™
Environmental Robotics

Correct wiring

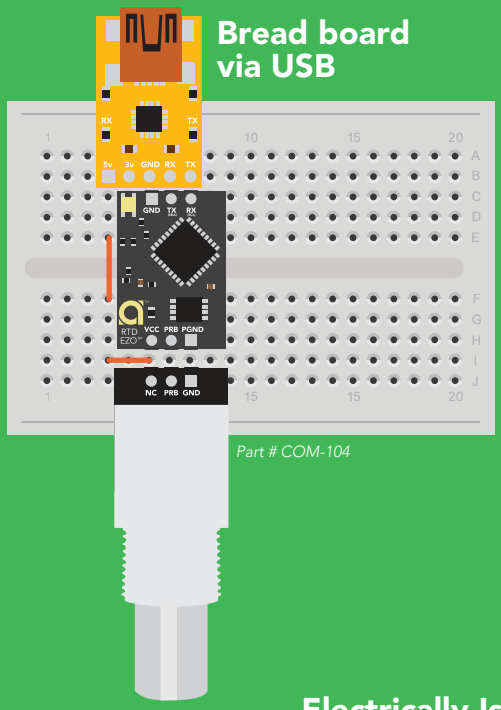
Carrier board

USB carrier board

Bread board

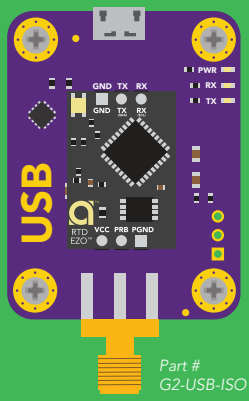


Bread board via USB

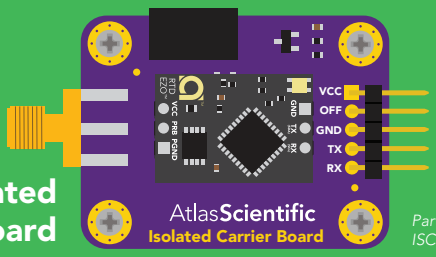


Part # COM-104

Part # ISCCB



Part # G2-USB-ISO



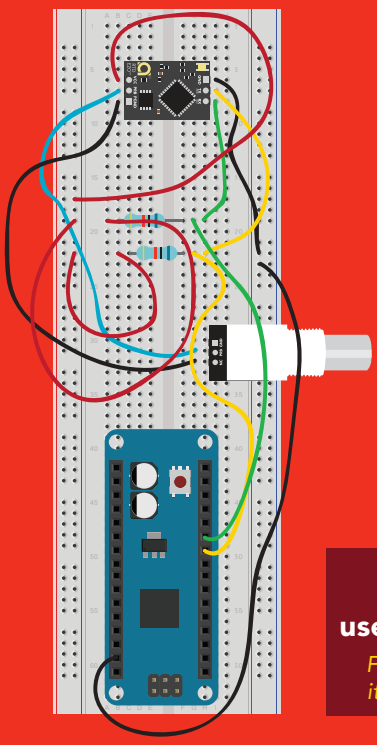
Electrically Isolated EZO™ Carrier Board

Part # ISCCB-2

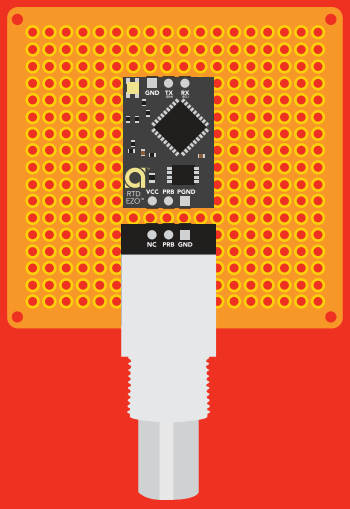
Incorrect wiring

Extended leads

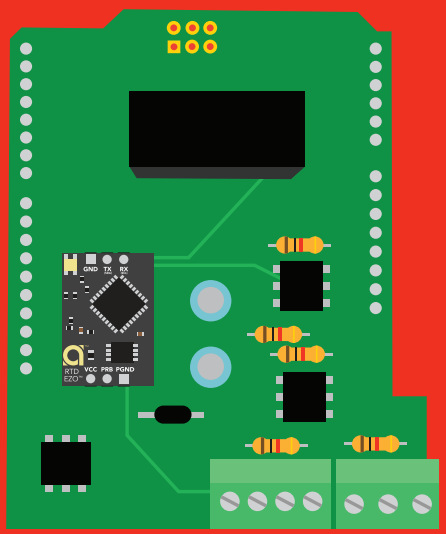
Sloppy setup



Perfboards or Protoboards



*Embedded into your device



NEVER
use Perfboards or Protoboards
Flux residue and shorting wires make it very hard to get accurate readings.

***Only after you are familar with EZO™ circuits operation**

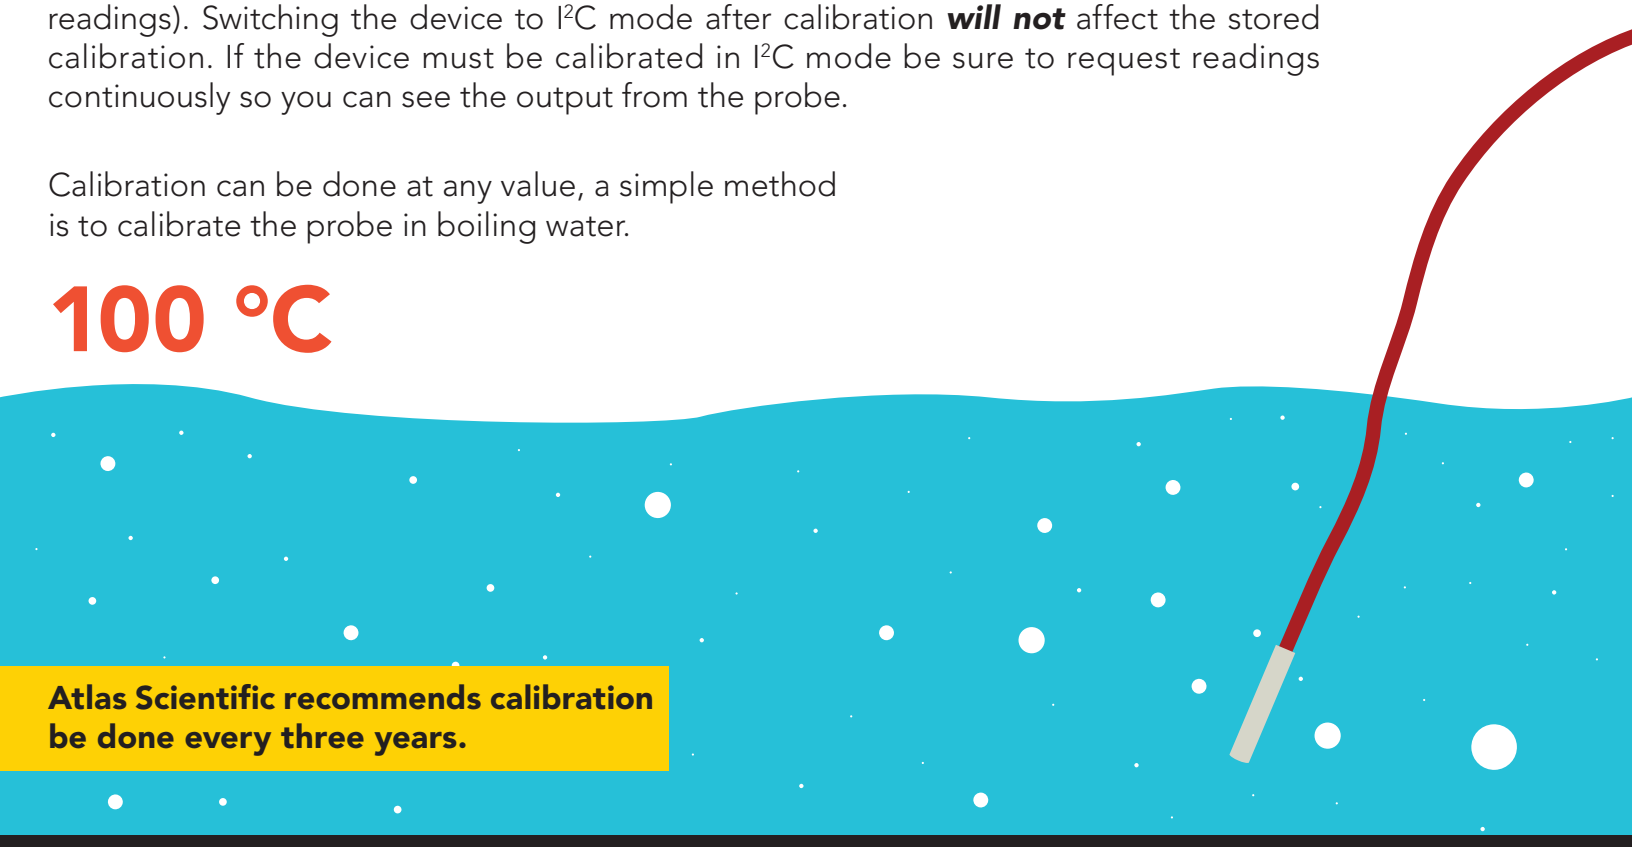
Calibration theory

The most important part of calibration is watching the readings during the calibration process. It's easiest to calibrate the device in its default state (UART mode, continuous readings). Switching the device to I²C mode after calibration ***will not*** affect the stored calibration. If the device must be calibrated in I²C mode be sure to request readings continuously so you can see the output from the probe.

Calibration can be done at any value, a simple method is to calibrate the probe in boiling water.

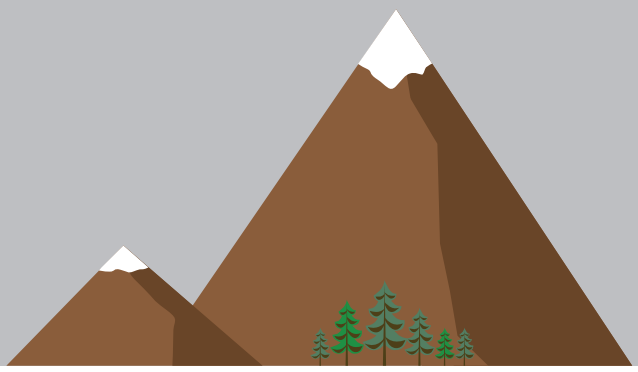
100 °C



Atlas Scientific recommends calibration be done every three years.

Elevation and boiling point table

Elevation in meters	Boiling point
305	98.9 °C
229	99.2 °C
152	99.5 °C
76	99.7 °C
0	100 °C
-76	100.3 °C
-152	100.5 °C



Use purified/distilled water

For accurate calibration using different temperature vaules, you must use a tool called a "*dry block calibrator.*"

AtlasScientific™ Environmental Robotics

On board data logger

- 50 readings
- Programmable storage interval

Minimum – 10 seconds
Maximum – 320,000 seconds

Temperature readings that are stored to the data logger will be retained even if the power is cut.

r 0.1

Response codes

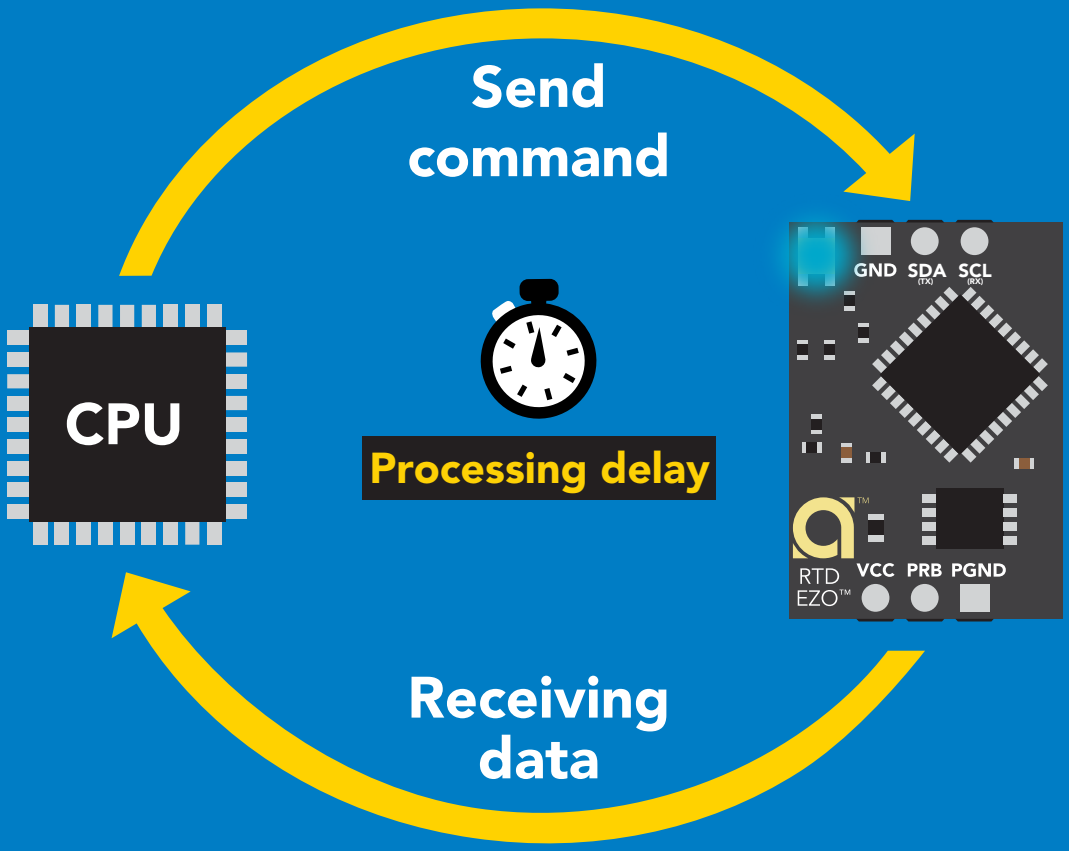
After a command has been issued, a 1 byte response code can be read in order to confirm that the command was processed successfully.

Reading back the response code is completely optional, and is not required for normal operation.



Example

```
I2C_start;
I2C_address;
I2C_write(EZO_command);
I2C_stop;

delay(300);
```

Processing delay

```
I2C_start;
I2C_address;
Char[ ] = I2C_read;
I2C_stop;
```

If there is no processing delay or the processing delay is too short, the response code will always be 254.

Response codes

Single byte, not string

255	no data to send
254	still processing, not ready
2	syntax error
1	successful request

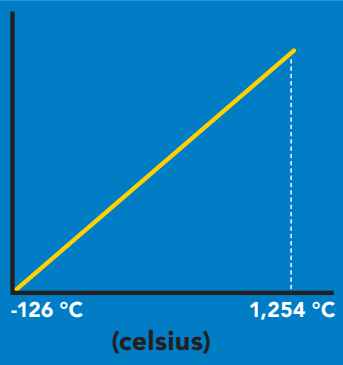
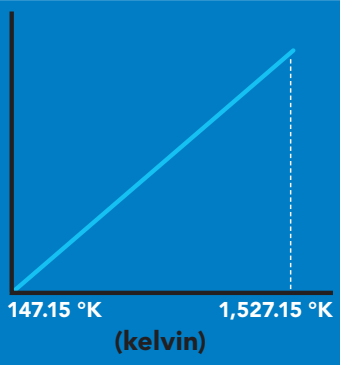
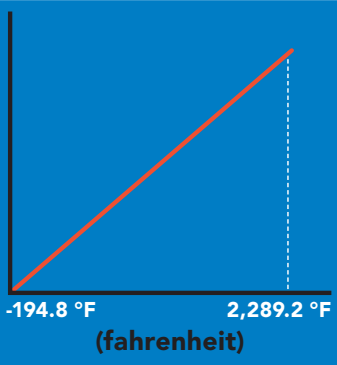
S,k	Wait 300ms — 1 (Dec) 0 (Null)
S,f	Wait 300ms — 1 (Dec) 0 (Null)
S,?	Wait 300ms — 1 (Dec) ?S,f (ASCII) 0 (Null) or 1 (Dec) ?S,k (ASCII) 0 (Null) or 1 (Dec) ?S,k (ASCII) 0 (Null)







AtlasScientific™ Environmental Robotics

Enable/disable data logger

Command syntax

300ms processing delay

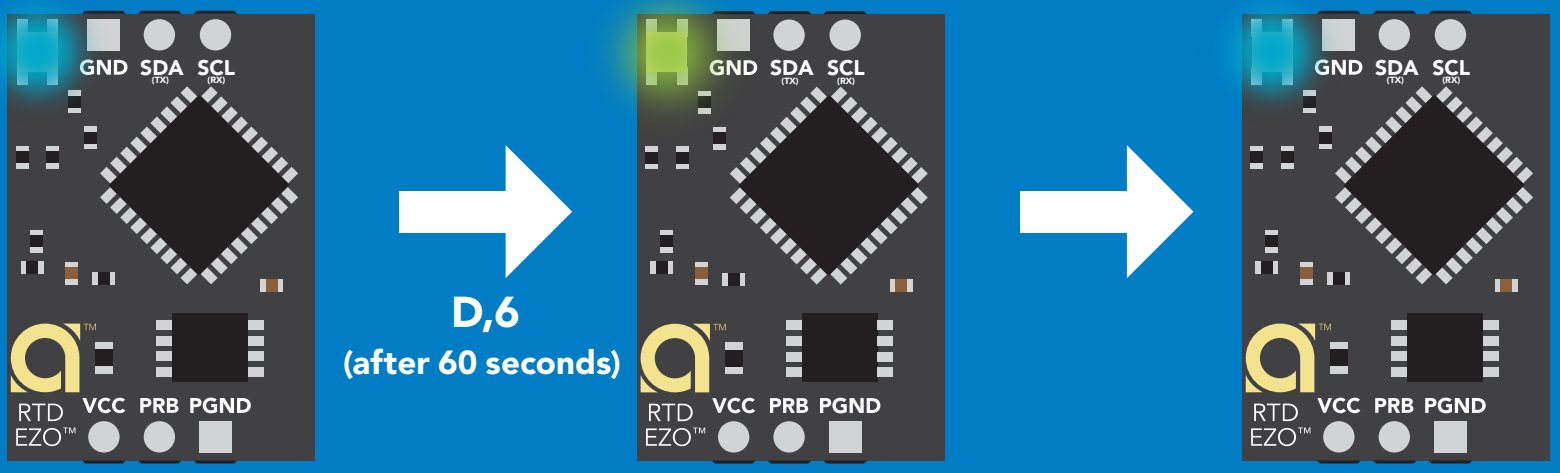
D,n n = (n x 10 seconds)

D,0 disable

D,? data logger storage interval?

The time period (n) is in 10 second intervals and can be any value from 1 to 32,000.

Example	Response
D,6	Wait 300ms → 1 (Dec) 0 (Null)
D,0	Wait 300ms → 1 (Dec) 0 (Null)
D,?	Wait 300ms → 1 (Dec) ?D,6 (ASCII) 0 (Null)



Atlas Scientific™ Environmental Robotics

Memory recall

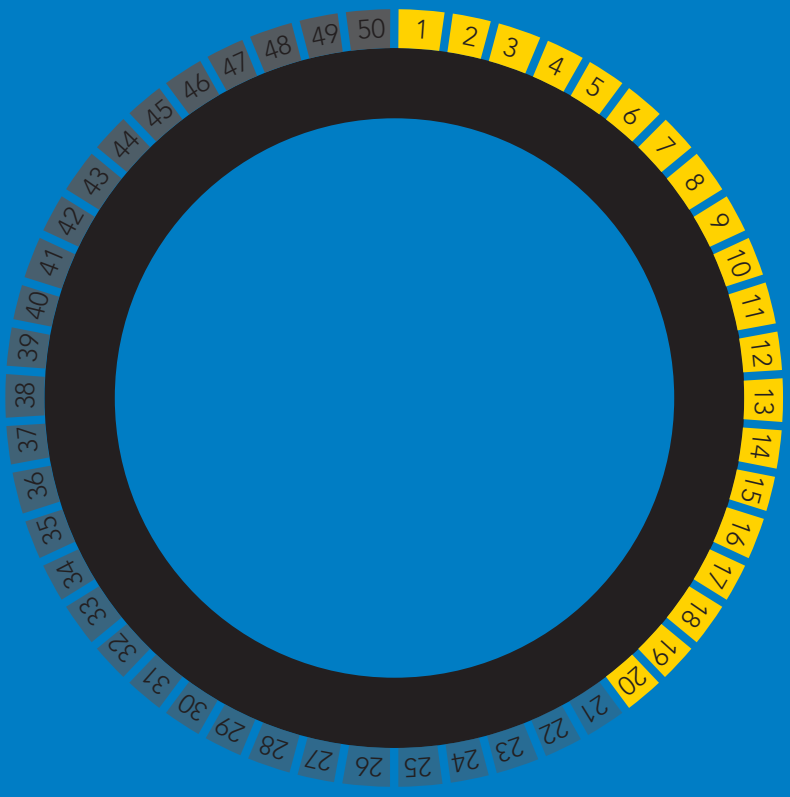
Disable data logger to recall memory.

Command syntax

300ms processing delay

M	**recall 1 sequential stored reading**
M,?	**display memory location of last stored reading**

Example	Response
M	Wait 300ms — 1 Dec — 1,100.00 ASCII — 0 Null
M,?	Wait 300ms — 1 Dec — 4,112.00 ASCII — 0 Null



Atlas Scientific Environmental Robotics

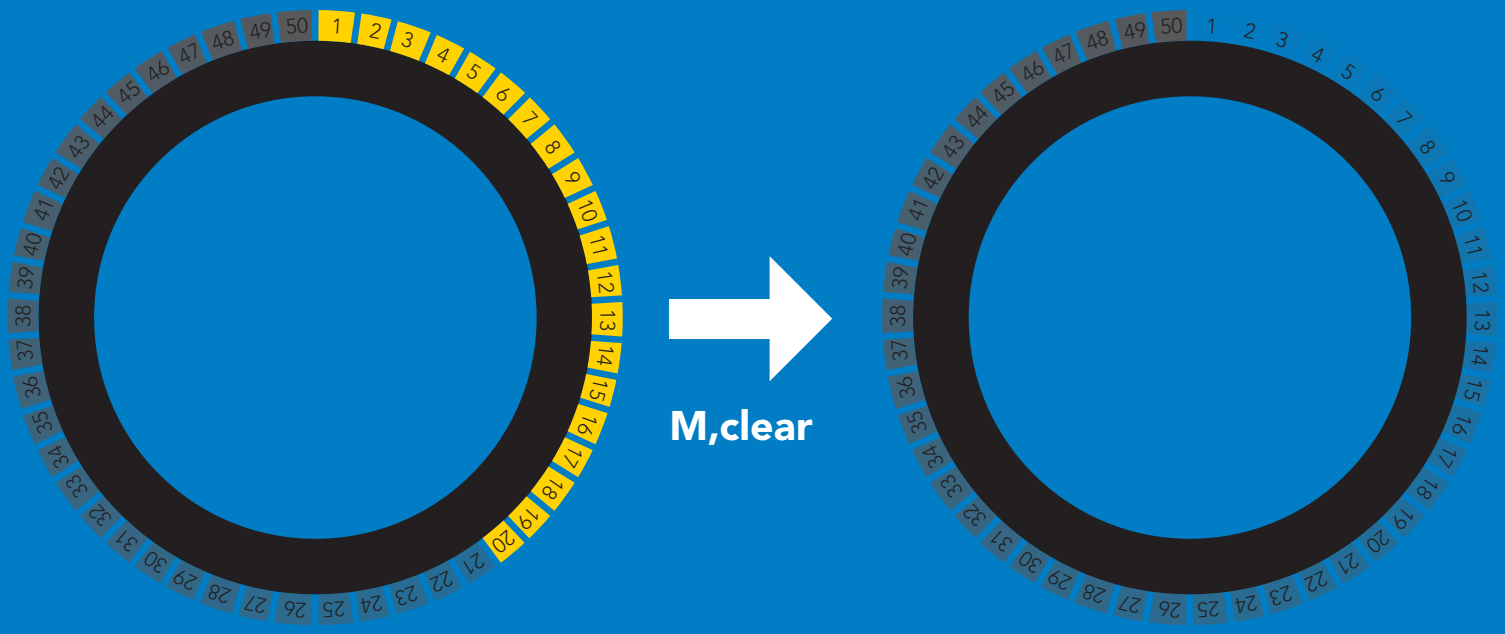
Memory clear

Command syntax

300ms processing delay

M,clear clear all stored memory

Example	Response
M,clear	Wait 300ms 1 Dec 0 Null



Atlas Scientific Environmental Robotics

Naming device

300ms processing delay

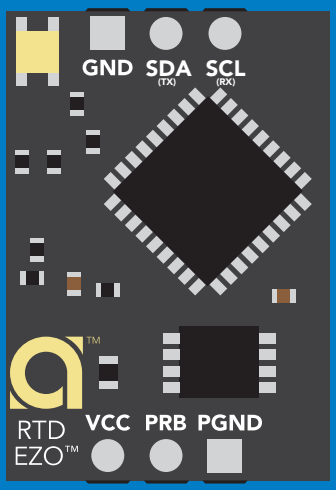
Command syntax

Do not use spaces in the name

Name,n	set name	n = _ _ _ _ _ _ _ _ _ _ _ _ _ _ _ _ (1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16)
Name,?	show name	Up to 16 ASCII characters

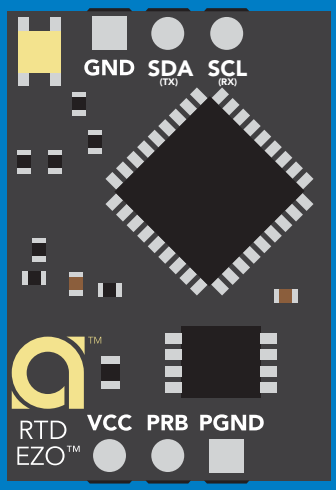
Example	Response
Name,zzt	Wait 300ms (1) Dec (0) Null
Name,?	Wait 300ms (1) Dec ?Name,zzt ASCII (0) Null

Name,zzt



1 0

Name,?



1 ?Name,zzt 0

Atlas Scientific Environmental Robotics

Device information

Command syntax

300ms processing delay

i device information

Example

i

Response

1 Dec

?i,RTD,2.01 ASCII

0 Null

Response breakdown

?i, RTD, 2.01

RTD, Device

2.01 Firmware

Reading device status

Command syntax

300ms processing delay

Status voltage at Vcc pin and reason for last restart

Example

Status

Response

1	?Status,P,5.038	0
Dec	ASCII	Null

Response breakdown

?Status, P, 5.038

- P: Reason for restart
- 5.038: Voltage at Vcc

Restart codes

P	powered off
S	software reset
B	brown out
W	watchdog
U	unknown

Sleep mode/low power

Command syntax

Sleep	enter sleep mode/low power

Send any character or command to awaken device.

Example	Response
Sleep	no response
Any command	wakes up device

Do not read status byte after issuing sleep command.

	STANDBY	SLEEP
5V	15.40 mA	0.4 mA
3.3V	13.80 mA	0.09 mA

Standby

Sleep

AtlasScientific™
Environmental Robotics
r 0.1

Protocol lock

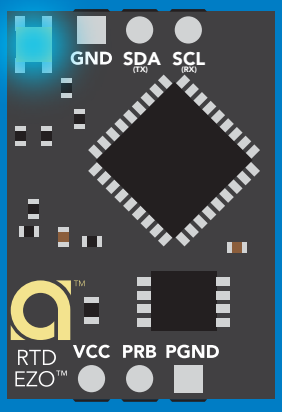
Command syntax

300ms processing delay

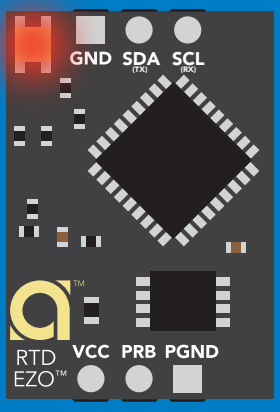
Plock,1	enable Plock	Locks device to I²C mode.
Plock,0	disable Plock	default
Plock,?	Plock on/off?	

Example	Response
Plock,1	Wait 300ms → 1 (Dec) 0 (Null)
Plock,0	Wait 300ms → 1 (Dec) 0 (Null)
Plock,?	Wait 300ms → 1 (Dec) ?Plock,1 (ASCII) 0 (Null)

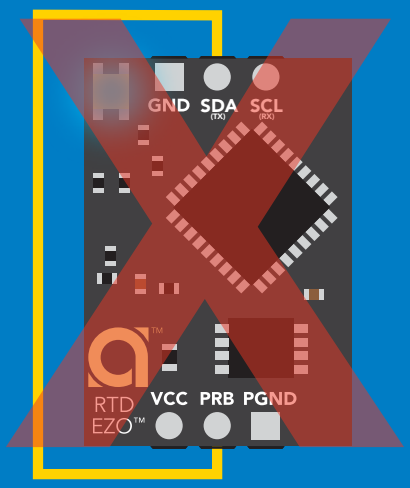
Plock,1



Baud, 9600



cannot change to UART



cannot change to UART

AtlasScientific™ Environmental Robotics

r 0.1

I²C address change

Command syntax

300ms processing delay

I2C,n sets I²C address and reboots into I²C mode

Example	Response
I2C,100	device reboot

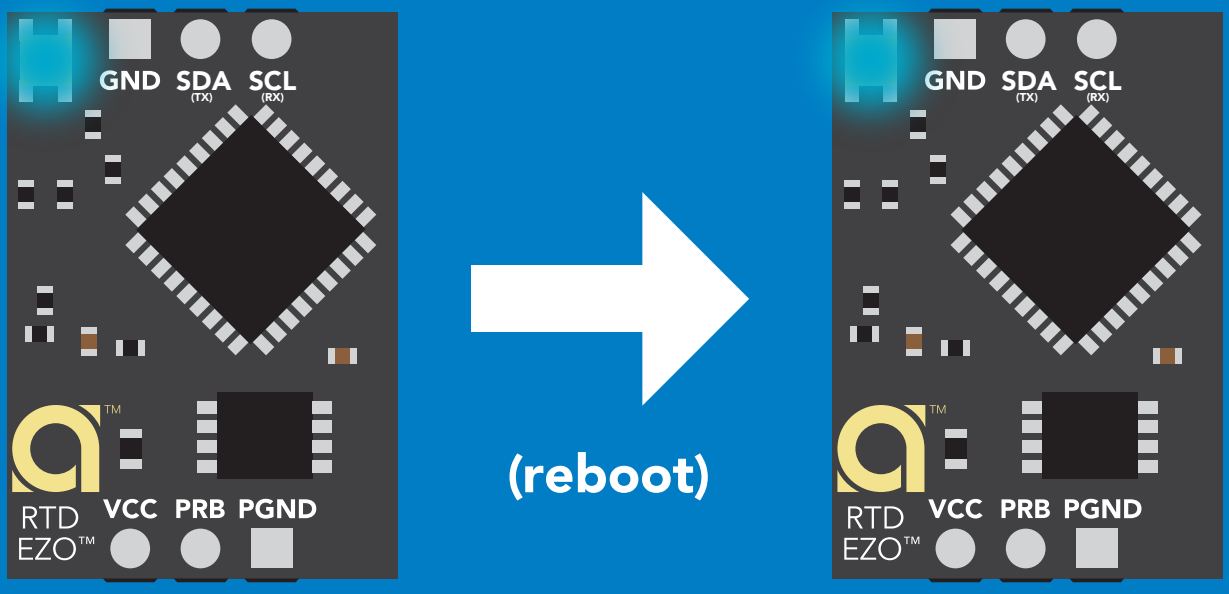
Warning!

Changing the I²C address will prevent communication between the circuit and the CPU until the CPU is updated with the new I²C address.

Default I²C address is 102 (0x66).

n = any number 1 – 127

I2C,100



Atlas Scientific™ Environmental Robotics

r 0.2

Factory reset

Command syntax

Factory reset will not take the device out of I²C mode.

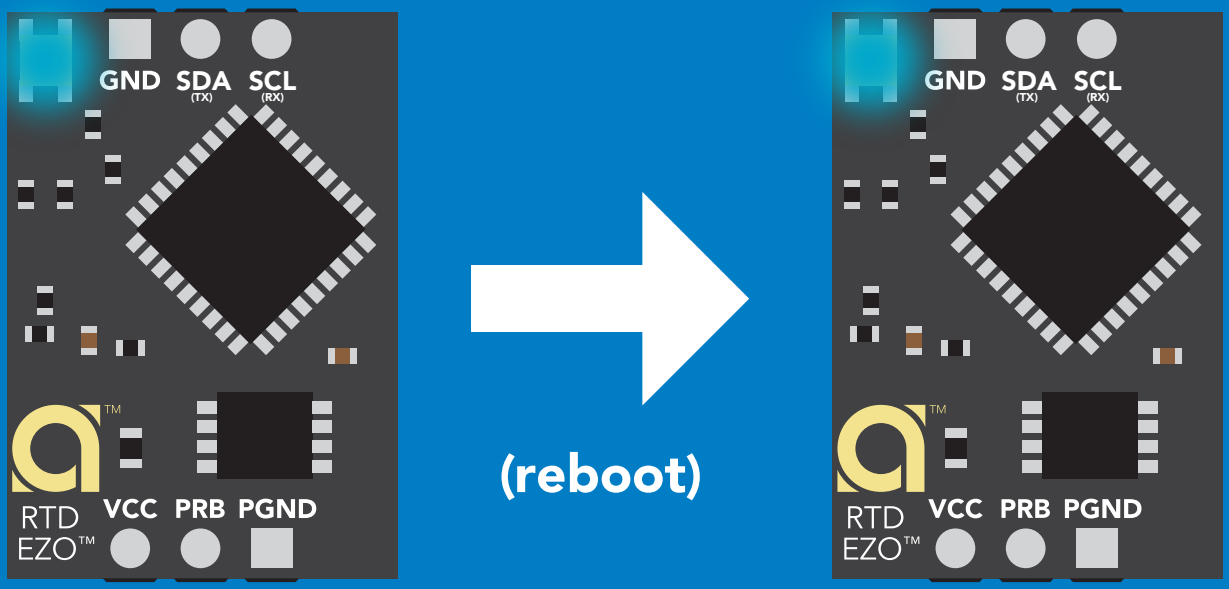
Factory	enable factory reset

I²C address will not change

Example	Response
Factory	device reboot

Clears calibration
LED on
Response codes enabled
Clears data logger

Factory



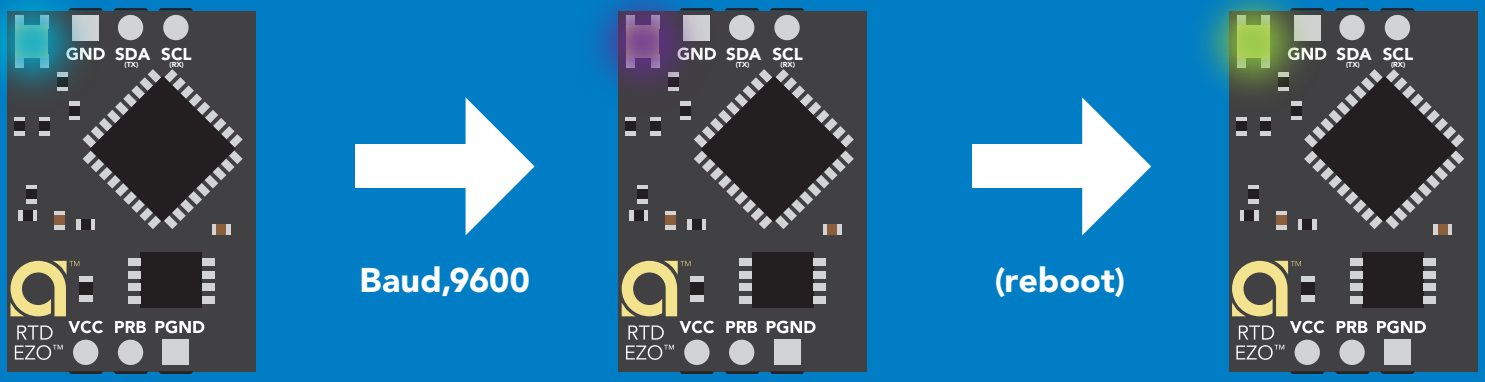
Change to UART mode

Command syntax

Baud,n	switch from I²C to UART

Example	Response
Baud,9600	reboot in UART mode

n = 300, 1200, 2400, 9600, 19200, 38400, 57600, 115200

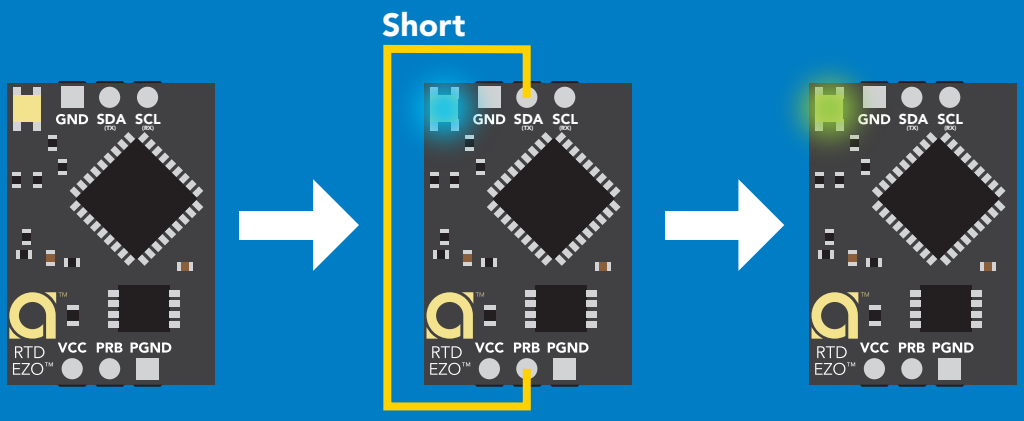


Manual switching to UART

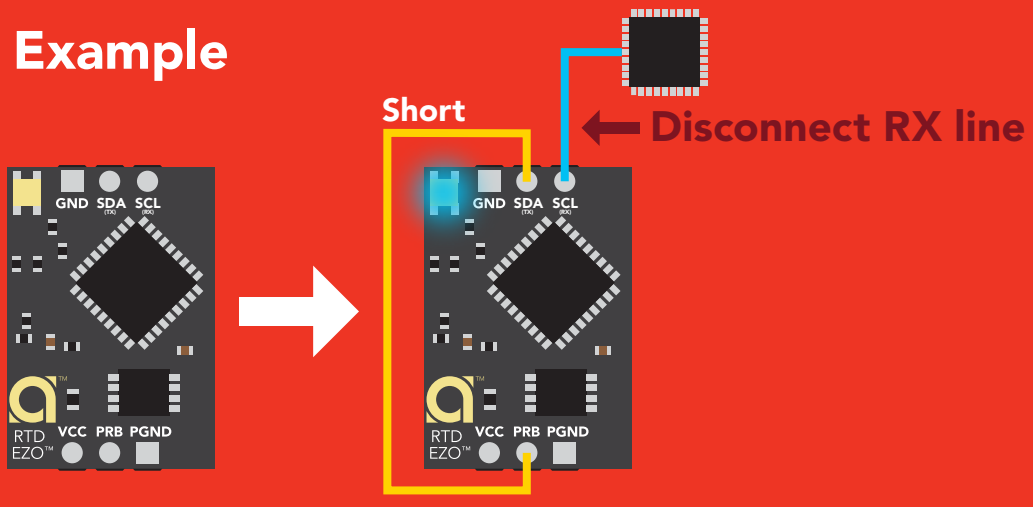
- Disconnect ground (power off)
- Disconnect TX and RX
- Connect TX to PRB
- Confirm RX is disconnected
- Connect ground (power on)
- Wait for LED to change from Blue to Green
- Disconnect ground (power off)
- Reconnect all data and power

Connecting TX to PRB only works for the EZO-RTD™ and the EZO-FLO™ circuits

Example

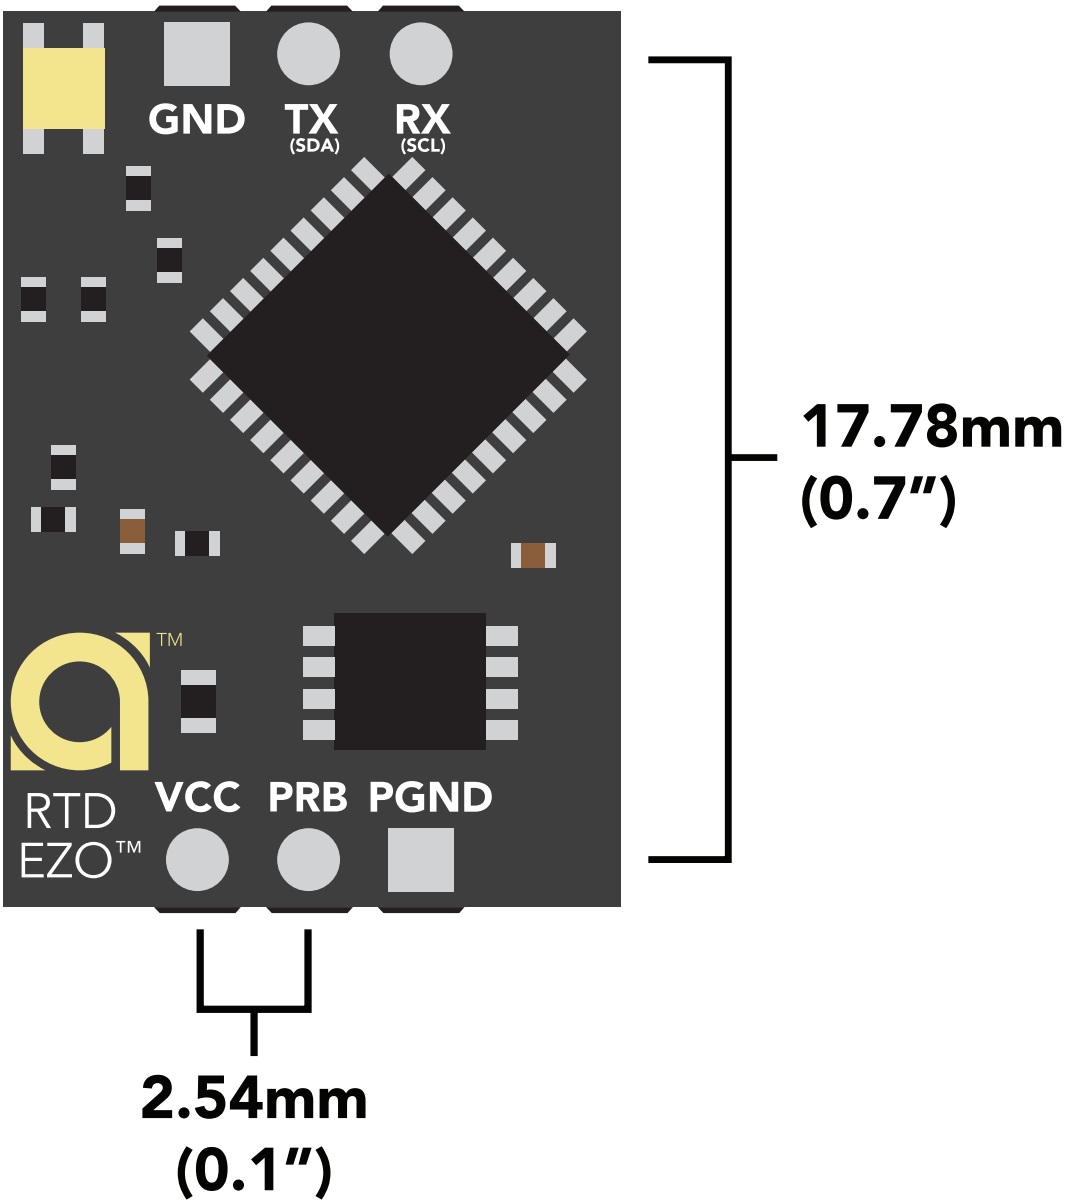


Wrong Example

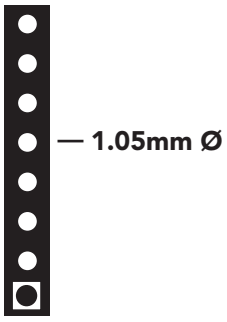


AtlasScientific™
Environmental Robotics
r 0.1

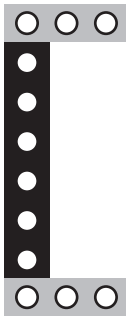
EZO™ circuit footprint



1 In your CAD software place a 8 position header.



2 Place a 3 position header at both top and bottom of the 8 position.



3 Delete the 8 position header. The two 3 position headers are now 17.78mm (0.7”) apart from each other.

Datasheet change log

Datasheet V 3.4

Revised accuracy equation on pg 7.

Datasheet V 3.3

Moved Default state to pg 13.

Datasheet V 3.2

Revised response for the sleep command in UART mode on pg 36.

Datasheet V 3.1

Added more information on the Export calibration and Import calibration commands.

Datasheet V 3.0

Changed "Max rate" to "Response time" on cover page.

Datasheet V 2.9

Removed note from certain commands about firmware version.

Datasheet V 2.8

Added information to calibration theory on pg 9.

Datasheet V 2.7

Revised definition of response codes on pg 45.

Datasheet V 2.6

Updated calibration processing delay time on pg.51.

Datasheet V 2.5

Revised Plock pages to show default value.

Datasheet V 2.4

Added new commands:
"Find" pages 22 & 49.
"Export/Import calibration" pages 26 & 52.
Added new feature to continous mode "C,n" pg 23.

Datasheet change log

Datasheet V 2.3

Added manual switching to UART information on pg. 59.

Datasheet V 2.2

Revised Baud command information on pg. 33.

Datasheet V 2.1

Revised entire datasheet.

Firmware updates

V1.02 – Plock (March 31, 2016)
- Added protocol lock feature “Plock”

V1.03 – EEPROM (April 26, 2016)
- Fixed bug where EEPROM would get erased if the circuit lost power 900ms into startup

V1.11 – Bug Fix (June 9, 2016)
- Fixed bug where a blank name would result in garbage ouput

V2.01 – Update (January 1, 2017)
- Replaced command “response” with “*OK”
- Replaced command “Serial” with “Baud”

V2.02 – Bug Fix (February 16, 2017)
- Fixed bug where calibration would not accept floating point numbers.

V2.10 – (May 9, 2017)
- Added "Find" command.
- Added "Export/import" command.
- Modified continuous mode to be able to send readings every "n" seconds.
- Sleep current is lowered.

V2.11 - Bug Fix (November 19, 2020)
- Fixed bug where the first reading after boot up could be -1024

Warranty

Atlas Scientific™ Warranties the EZO™ class RTD circuit to be free of defect during the debugging phase of device implementation, or 30 days after receiving the EZO™class RTD circuit (which ever comes first).

The debugging phase

The debugging phase as defined by Atlas Scientific™ is the time period when the EZO™ class RTD circuit is inserted into a bread board, or shield. If the EZO™ class RTD circuit is being debugged in a bread board, the bread board must be devoid of other components. If the EZO™ class RTD circuit is being connected to a microcontroller, the microcontroller must be running code that has been designed to drive the EZO™ class RTD circuit exclusively and output the EZO™ class RTD circuit data as a serial string.

It is important for the embedded systems engineer to keep in mind that the following activities will void the EZO™ class RTD circuit warranty:

- **Soldering any part of the EZO™ class RTD circuit.**
- **Running any code, that does not exclusively drive the EZO™ class RTD circuit and output its data in a serial string.**
- **Embedding the EZO™ class RTD circuit into a custom made device.**
- **Removing any potting compound.**

Reasoning behind this warranty

Because Atlas Scientific™ does not sell consumer electronics; once the device has been embedded into a custom made system, Atlas Scientific™ cannot possibly warranty the EZO™ class RTD circuit, against the thousands of possible variables that may cause the EZO™ class RTD circuit to no longer function properly.

Please keep this in mind:

1. **All Atlas Scientific™ devices have been designed to be embedded into a custom made system by you, the embedded systems engineer.**

2. **All Atlas Scientific™ devices have been designed to run indefinitely without failure in the field.**

3. **All Atlas Scientific™ devices can be soldered into place, however you do so at your own risk.**

Atlas Scientific™ is simply stating that once the device is being used in your application, Atlas Scientific™ can no longer take responsibility for the EZO™ class RTD circuits continued operation. This is because that would be equivalent to Atlas Scientific™ taking responsibility over the correct operation of your entire device.
