To users:

Welcome to choose our company repeater. We will provide you with the reliable, clearly, efficient communication service. In order to let you learn more functions, usage and maintenance method about this repeater, please read this manual carefully before you use the product.

- Please keep the manual, in order to offer reference or use of this product
- In order to safeguard your legitimate rights and interests from infringement, please seriously truthfully fill in when buying the company's products (with repair service card), and ask for the purchase vouchers of real and effective.
- This product relates to upgrade or improve, the company reserves without prior notice to change this manual at any time above the rights of software and hardware specifications
- All specifications mentioned are only for reference.
- Although all words are carefully check, it is hard to avoid errors, the company reserves the final explanation.

Safety Information to Users

For your efficient and safe use of this repeater, please read the following information carefully.

- This repeater input power is DC12V~24V.
- The maintenance of this repeater can be only performed by professional technicians. Unauthorized self-disassembly is not allowed.
- To avoid EMC interference or EMC compliance problem, please do not install or use this repeater in areas with labels that read "Please Turn Off the Radio."
- When in the car with airbags, do not install the repeater in the area where the airbags may be functioning.
- When approaching the blasting area and the detonator area, please turn off the repeater first.
- You are forbidden to operate this repeater in flammable and explosive environments.
- Please do not place this repeater at a wet, rainy or overabundance of dust areas.
- Please do not expose this repeater to direct sunlight for a long time or near the heating devices.
- When install the repeater antenna outdoor, the lightning arrester must be install Firstly then connected to the antenna, and the chassis must be reliably grounded to prevent lightning.

➤Installing/Removing the Power Adapter

Hold the power adapter connector and rotate it clockwise into the power port on the side of the repeater until it is securely tightened. To remove the power adapter, rotate it counterclockwise and detach the connector.

➤Installing/Removing the Antenna or Feedline

Hold the base of the antenna or one end of the feedline, and rotate it clockwise into the antenna port on the side of the repeater until it is securely tightened. To remove the antenna or feedline, rotate it counterclockwise and detach it.

➤Installation/Dismounting of Stand

If necessary, the 4 mounts can be inserted into the screw holes on the rear panel of the repeater. To remove the mounts, unscrew the screws.

Get Familiar with the Repeater

Key Functions

1. "MENU" Menu Button

Short Press: Acts as the menu button on the standby interface; serves as the confirm button within menus.

Long Press: Locks or unlocks the keypad on the standby interface.

2. "▲" Upward Button

Short Press: Cycle upward through the options in the menu. In standby mode, it increases the volume. (When the DB-9 interface of the repeater is connected to the speaker mic, a short press increases the speaker volume.)

Long Press: Cycles through the channels in an increasing sequence in standby mode.

3. "▼" Downward Button

Short Press: Cycle downward through the options in the menu. In standby mode, it decreases the volume. (When the DB-9 interface of the repeater is connected to the speaker mic, a short press decreases the speaker volume.)

Long Press: Cycles through the channels in a decreasing sequence in standby mode.

4. "▲" Upward and "▼" Downward

Pressed Simultaneously: Displays the sub-audio frequency of the current channel.

Get Familiar with the Repeater

Seq.	Character	Description
1	 RX	Reception Indicator
2	 TX	Transmission Indicator
3	L	Low Power
4	H	High Power
5		Keypad Lock
6	W	Wideband
7	N	Narrowband
8	CT	CTCSS
9	DCS	CDCSS
10	°C	Low Temperature Mode
11	CH	Channel

Radio Settings

Seq.	Function	Options Menu	Description
1	Channel Lock	Manual / Auto	Channel Lock Setting
2	Scan Channel	On / Off	Channel Scanning
3	Backlight	On / Auto / Off	Display Screen Brightness Setting
4	Low Temperature Mode	On / Off	Low Temperature Operation Setting
5	Audio Set	0-9 Levels	Audio output adjustable
6	Modem Set	-3 to +3 Adjustable	Microphone Gain
7	Init Option	Confirm	Menu Reset to Factory Defaults
8	Software Version	On / Off	Check Firmware Version

Basic Operation

1.Channel lock

Manual: Lock the channel by pressing and holding the MENU button for over 2 seconds; unlock by repeating the action.

Auto: Automatically locks the keypad after 15 seconds of inactivity; unlock by pressing and holding the MENU button for over 2 seconds.

2.Scan Channel

On: Enables scanning of programmed channels; exits scan upon receiving a signal and returns to scan mode after the transmission ends.

Off: Disables scanning.

3.Backlight

On: Backlight stays on.

Off: Backlight stays off

Auto: Backlight turns on with keypad operation or signal reception; turns off automatically after 10 seconds of inactivity

4.Low Temperature Mode

Off: Low-temperature mode is off.

On: When the ambient temperature reaches -15°C , the internal heating system activates, allowing the repeater to operate at -30°C .

5.Audio Set

Adjustable audio output levels ranging from 0 to 9, when the device receives a signal, it outputs a corresponding audio amplitude via the DB9 interface

level 0 disables audio output

level 9 outputs approximately 150mV audio

6.Modem Set

Adjustable from -3 to +3. It adjust the microphone gain. When the DB-9 interface of the repeater is connected to the speaker mic, adjust the microphone gain.

-3: Minimum Microphone Gain

0: Medium Microphone Gain

+3: Maximum Microphone Gain

7.Init Option

Resets menu settings to default; does not affect frequency settings.

8.Software Version

Displays the current software version of the radio.

9.Repeater Switch

On: Activates the relay mode

Off: Deactivates the relay mode

10.Repeater Delay

Adjustable Levels 1-9

Off: Turns off the delay feature entirely

Adjust the delay level according to your needs.

11.Squelch Level

Adjustable from 0 to 9 levels

0: Squelch Always On

At lower squelch levels, the squelch threshold is shallower, resulting in a longer reception distance but weaker interference rejection.

At higher squelch levels, the squelch threshold is deeper, limiting the reception distance but enhancing the interference rejection capability.

12.Roger beep Elimination (STE)

Off: After transmission, the speaker of the radio will produce a brief "click" sound

On: After transmission, the speaker of the radio will be muted

Elimination Modes: Frequency, 120°C, 180°C, 240°C

13.Channel Mode

Channel Mode: Channels are displayed by their channel numbers.

Channel & Frequency Mode: Channels are displayed by both their channel numbers and frequencies

14.High/Low Power

Select high or low power for each channel through programming software

15.Wide/Narrow Band

Select wide or narrow bandwidth for each channel through programming software

16.Increase/Decrease Volume

Press the▲button briefly to increase volume

press the▼button briefly to decrease volume

17.CTCSS/DCS

Set CTCSS/DCS signaling on channels through programming software. When CTCSS/DCS signaling is set for a channel, only signals with the same CTCSS/DCS code can unlock the squelch. If different CTCSS/DCS codes are used on the same channel for calling, the repeater will not forward the signal

Channel List

Channel	Receive Frequency	Transmit Frequency	Sub-audio	Power	Bandwidth
1	467.5500	462.5500	136.5	H	W
2	467.5750	462.5750	136.5	H	W

Features

- Small and compact, solid and dust-proof.
- Simple and convenient installation, flexible operation, can be operated as fixed or mobile.
- Multi working power selection, working with the matching power adapter, and also can work under DC12V~24V power or car power.
- The use of antenna can be selected according to actual demand.

Technical Parameters

Specifications

Frequency Range	462.550-462.725 MHz (TX) 467.550-467.725 MHz (RX)
Channel Capacity	16 CH
Bandwidth	20KHZ/12.5KHZ
Audio Distortion	≤5%
Frequency Stability	±2.5ppm
Output Power	22W / 5W
Maximum Frequency Deviation	4.5KHZ/2.5KHZ
Modulation Mode	FM
Adjacent Channel Selectivity	≥65dB
Transmit Current	≤6A
Operating Voltage	15V DC
Antenna Impedance	50Ω
Operating Temperature	-30°C~+60°C
Dimensions	285x185x68mm
Weight	3563g

Note: Power will further attenuate after passing through the feeder. The degree of attenuation depends on the diameter, length, and material of the feeder. Please select an appropriate feeder according to your specific situation.

Troubleshooting Guide

Common Problem	Solution
LCD no display Repeater can not be power-on	Checking the power cord and adapter
The repeater can not receive intercom signal Or User can not received the signal from Repeater send out	<ol style="list-style-type: none">1. The connector of RF cable is loosed2. Antenna or cable is damaged3. Talking range is exceed repeater effect range4. Check if the transmit frequency of the walkie-talkie matches the receive frequency of the repeater, including the CTCSS/DCS settings. This repeater operates in the GMRS frequency band.
Front part of the speech is not been relayed	Enter PTT in 0. 5s then begin speaking, Delay speech to allow the system delay: System delay owing to: <ol style="list-style-type: none">1. CTCSS/CDCSS decode2. Requirements for signaling systems
Heating up after one hour or less of use	It is normal for the device to reach around 50°C after continuous use for one hour, and the temperature remains similar even after 24 hours of continuous operation. If the temperature exceeds this range, please check the connection between the feeder and the antenna.
Noise during transmission	<ol style="list-style-type: none">1. Check if the antenna is properly seated.2. Check for potential interference from nearby signals.3. Verify if the antenna is compatible with the RT97L frequency band.4. Try adjusting the squelch level to its mid-range value.

EN:User' instructions should accompany the device when transferred to other users.

When transferring the equipment to another user, CN shall include the user instructions.

Unauthorized modification and adjustment

Changes or modifications not expressly approved by the party responsible for compliance may void the user's authority granted by the local government radio management departments to operate this radio and should not be made. To comply with the corresponding requirements, transmitter adjustments should be made only by or under the supervision of a person certified as technically qualified to perform transmitter maintenance and repairs in the private land mobile and fixed services as certified by an organization representative of the user of those services. Replacement of any transmitter component (crystal, semiconductor, etc.) not authorized by the local government radio management departments equipment authorization for this radio could violate the rules.

Radio License

The detailed classification and the use of your two-way radios, please contact the local government radio management departments. Use of this radio outside the country where it was intended to be distributed is subject to government regulations and may be prohibited.

This two-way radio is a GMRS station. A valid individual license is required to operate a GMRS station. To obtain an individual license, an applicant must be eligible and follow the applicable rules and procedures established by FCC. The applicant must pay the required application and regulatory fees. Each individual license in the GMRS will normally have a term of ten years from the date of grant or renewal, and may be renewed pursuant to the procedures of FCC. To obtain a GMRS operator license, you need FCC Form 605 & 159, we suggest visiting the FCC website at <https://www.fcc.gov/wireless/-support/fcc-form-605>, which includes necessary instructions. More questions about the license application, please contact the FCC at 1-888-225-5322 or go to the FCC's website: <http://www.fcc.gov>.

FCC

EN: This device complies with part 15 of the FCC Rules. Operation is subject to the condition that this device does not cause harmful interference. (Licensed radios are applicable);

CN: This equipment complies with Part 15 of the FCC Rules. Operation of this equipment is subject to the condition that it does not cause harmful interference.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: **(Other devices are applicable)**

(1) This device may not cause harmful interference.

(2) This device must accept any interference received, including interference that may cause undesired operation.

Disposal

Note: Applicable to electronic products.

The crossed-out wheeled-bin symbol on your product, literature, or packaging reminds you that all electrical and electronic products, batteries, or accumulators must be taken to designated collection locations at the end of their working life. Do not dispose of these products as unsorted municipal waste. Dispose of them according to the laws and rules in your area.

RF Safety

This two-way radio uses electromagnetic energy in the radio frequency (RF) spectrum to provide communications between two or more users over a distance. RF energy, which when used improperly, can cause biological damage. Please refer to the following websites for more information on what RF energy exposure is and how to control your exposure to assure compliance with established RF exposure limits: <http://www.who.int/en/>

Transmit no more than the rated duty factor 50% of the time. Transmitting necessary information or less, is important because the radio generates measurable RF energy exposure only when transmitting in terms of measuring for standards compliance. For users who wish to further reduce their exposure, some effective measures to reduce RF exposure include:

- Reduce the amount of time spent using your wireless device.
- Use a speakerphone, earpiece, headset, or other hands-free accessory to reduce proximity to the head (and thus head exposure). While wired earpieces may conduct some energy to the head and wireless earpieces also emit a small amount of RF energy, both wired and wireless earpieces remove the greatest source of RF energy (handheld device) from proximity to the head and thus can greatly reduce total exposure to the head.
- Increase the distance between wireless devices and your body.

This radio is designed for and classified as "Occupational/Controlled Use Only". Occupational/Controlled environments are defined as locations where there is exposure that may be incurred by people who are aware of the potential of exposure, for example, as a result of employment or occupation. It means a radio must be used only by individuals aware of the hazards, and the ways to minimize such hazards; Not intended for use in a General population/uncontrolled environment.

RF Safety distance

Keeping the radio at a proper distance is important as RF exposure decreases with increasing distance from the proper antenna. A proper antenna is an antenna supplied with this radio by the manufacturer or specifically authorized by the local authority for use with this radio. This radio can only be operated by use of an antenna of a type and maximum (or lesser) gain approved for the transmitter under regulations and rules.

During operation, the separation distance (1.2m, Safety Distance in Meters) between the user and the antenna subject to actual regulations. This separation distance will ensure that there is sufficient distance from a properly installed externally-mounted antenna to satisfy the RF exposure requirements. Transmit only when people are the recommended minimum lateral distance away from a properly installed externally mounted antenna according to installation instructions.

Electromagnetic Interference/Compatibility

Nearly every electronic device is susceptible to electromagnetic interference (EMI) if inadequately shielded, designed, or otherwise configured for electromagnetic compatibility. During transmissions, your radio generates RF energy that can possibly cause interference with other devices or systems. To avoid such interference, turn off the radio in areas where signs are posted to do so, such as hospitals or healthcare facilities.

Note: This equipment has been tested and found to comply with the limits for a Class B digital device. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if

not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Turn off your radio in the following conditions:

Note: Avoid mixing ordinary walkie-talkies with explosion-proof devices

- Turn off your radio prior to entering any area with a potentially hazardous or explosive atmosphere. Only radio types that are especially qualified should be used in such areas as "Intrinsically Safe".

Note: the areas with potentially explosive atmosphere referred to above include blasting caps, blasting areas, inflammable gas, dust particles, metallic powders, grain powders, fueling areas such as below decks on boats, fuel or chemical transfer or storage facilities, areas where the air contains chemicals or particles (such as grain, dust or metal powders) and any other area where you would normally be advised to turn off your vehicle engine. Areas with potentially explosive atmospheres are often – but not always posted.

- Turn off your Radiocommunication device when taking on fuel or parked at gasoline service stations.
- Turn off your radio when on board an aircraft. Any use of a radio must be in accordance with applicable regulations per airline crew instructions.
- Do not use any radio that has a damaged antenna. If a damaged antenna comes into contact with the skin when the radio is in use, a burn can result.
- Turn off your radio before removing or installing accessories.
- When the transceiver is used for long transmissions, the radiator and chassis will become hot.

Use of Communication Devices While Driving

Note: Applicable to handheld or mobile stations

- Always check the laws and regulations on the use of radios in the areas where you drive. Use of Communication Devices, for example, mobile radio, may not be allowed.
- Give full attention to driving and to the road.
- Use hands-free operation, if available.
- Pull off the road and park before making or answering a call, if driving conditions or regulations so require.
- Do not place a portable device in the area over an air bag or in the airbag deployment area. The device may be propelled with great force and cause serious injury to occupants of the vehicle when the airbag inflates.

Dedicated for Children's Devices

WARNING: CHOKING HAZARD—Small Parts. Not suitable for children under 3 years old.

Adapter

The plug of the adapter is considered a disconnect device. The socket-outlet shall be installed near the equipment and shall be easily accessible.

Authorized Accessories List

Guarantee

Model Number: _____
Serial Number: _____
Purchasing Date: _____
Dealer: _____ Telephone: _____
User's Name: _____ Telephone: _____
Country: _____ Address: _____
Post Code: _____ Email: _____

Remarks:

1. This guarantee card should be kept by the user, no replacement if lost.
2. Most new products carry a two-year manufacturer's warranty from the date of purchase. Further details, pls read <http://www.retevis.com/after-sale/>
3. The user can get warranty and after-sales service as below:
 - Contact the seller where you buy.
 - Products Repaired by Our Local Repair Center
4. For warranty service, you will need to provide a receipt proof of purchase from the actual seller for verification

Exclusions from Warranty Coverage:

1. To any product damaged by accident.
2. In the event of misuse or abuse of the product or as a result of unauthorized alterations or repairs.
3. If the serial number has been altered, defaced, or removed.
